We are writing to request that your company consider supporting Team 5030, the Second Mouse, a FIRST® Robotics Team. *FIRST*® (For Inspiration and Recognition of Science and Technology) is a multinational, non-profit robotics organization.

Last season, our team was able to participate in two tournaments, and was awarded the Industrial Design Award at the RPI Tech Valley Championship. This coming season we are planning to compete in tournaments in New York City and Rochester, with the hopes of advancing to the World Championship in St. Louis, Missouri.

Our FRC (First Robotics Competition) team draws students, from several local high schools, that are highly motivated and interested in STEM fields. FRC provides us an opportunity to learn more about engineering processes and connect with other teams around the World.

The team's build season is only 45 days long. In that short time frame, a fully functioning robot must be designed, built, programmed, and tested. In order for that to happen, our team must have access to highly specific tools, materials, electronics, and mentors with expertise in these fields.

Our team supports the 3 "M" ideals for sponsorship:

Monetary Support • Mentoring Support • Materials Support

We hope your organization will consider any or all of these needs in your support of our FRC team. We look forward to hearing from you in the near future. Please feel free to contact us with any questions that you may have.

Sincerely,

The Second Mouse 5030
